

Multi Site Procurement Platform

CMS's procurement platform forms the central part of our CMS Hub cloud based system, providing an easy to use multi site procurement system covering all areas from the initial purchase request through to invoice handling.

Originally designed to meet the requirements of our in-house construction company CMS Procure has been released as a procurement platform available to the construction industry.

Designed in 2018 and constantly improved the system provides all the requirements to meet the needs of small to medium size contractors.

Purchase Request

Automated Multiple Quote

Supplier Database Operative Database

Delivery Tracking Partial Orders

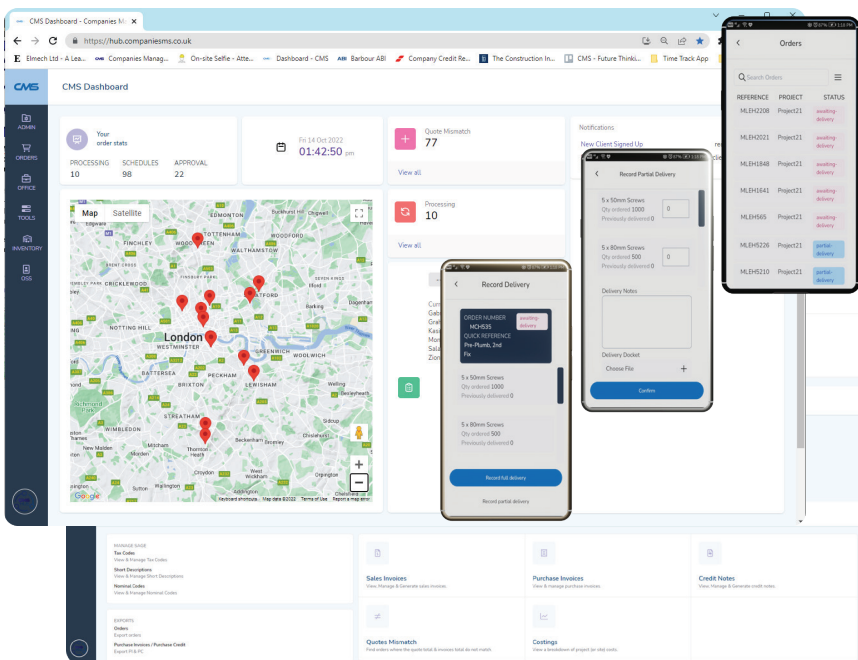

Invoice Management with Quote Mismatch

Historical Tracking Over all Steps

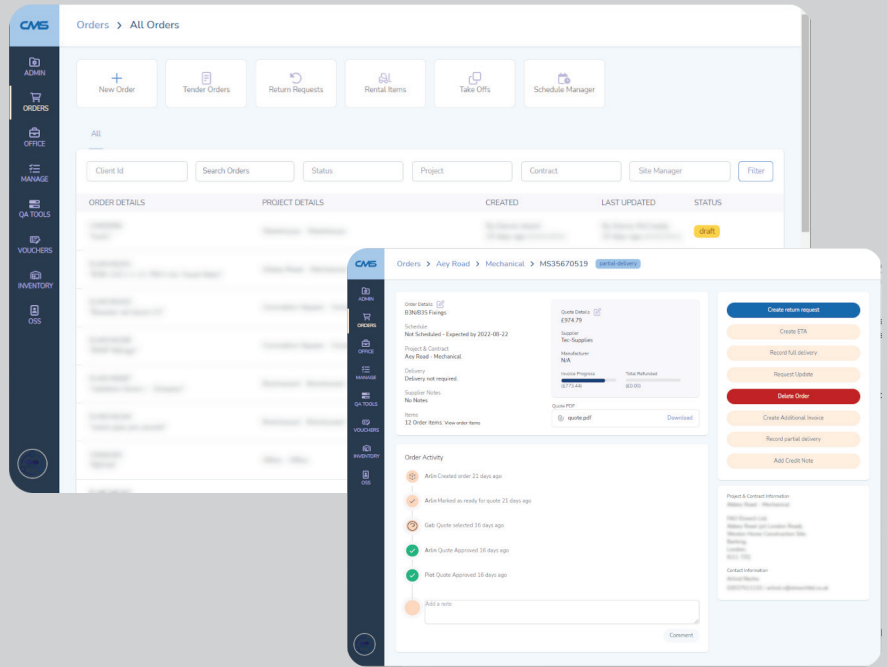

CMS Buying Group Access

Cloud based Web User Interface

Intuitive User Interface maximising available information over a reduced set of screens.

- Visual Progress
- Automated Action Emails
- Multi Level Approval
- Automated History with comments
- Automated Quotation requests
- Quote review prior to approval
- Invoice handling
- User Request for Updates

End to End Process

From the Initial Purchase Request, Quote, Approval through to Final Invoice Handling and Cost Tracking, all steps are historically logged and retrievable. Keeping your whole procurement process electronic, audit-able and traceable.

The Smart Phone app allows your site staff to quickly receive log and recognise deficiencies when receiving orders as well as updating the system live.

By recognising partial orders suppliers can be made to react immediately.

If an invoice is received that does not match the quote the system highlights these facts and allows corrective action to be taken at that time.

Access to CMS Buying Group

Take advantage of the CMS Group buying power by also requesting competitive quotes from our Buying Group. Or if required switching the system to CMS Managed Purchasing so that you can use our Procurement department to fill in while still retaining full overview and approval of all steps.

Implementation & Support

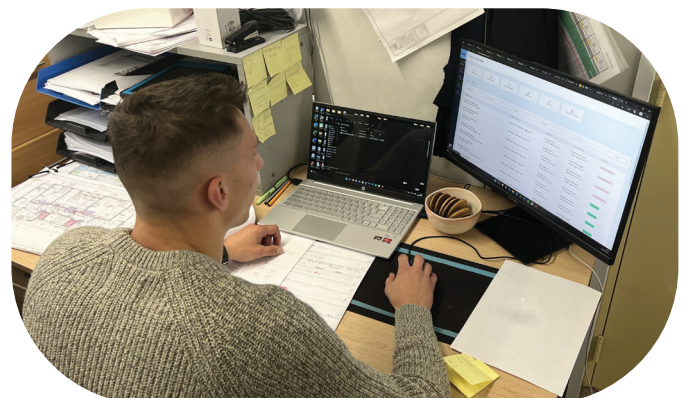

CMS Procure is a cloud based app using a web user interface as well as IOS or Android Apps. Designed to offer an Intuitive Interface with short learning curve.

System is continually maintained and upgraded with changes implemented seamlessly, requiring little user interaction.
